

September Newsletter

EngineerAid has come on leaps and bounds in the last month. EngineerAid is active in developing its contacts and networks through aid organisations and engineering institutes, companies and universities. EngineerAid now has in place a vast database of engineers to provide extensive knowledge to facilitate the solving of incoming enquiries. During September EngineerAid has met with a number of aid organisations and initiated talks with regard to partnerships. In the coming months EngineerAid focus will be on developing these partnerships as well as extending its network of volunteer engineers.

EngineerAid Partnership Talks with VSO

EngineerAid successfully met with VSO in London to initiate discussions of a partnership strategy. VSO, as a globally based aid organisation, work towards providing long term sustainability through their efforts.

EngineerAid will be able to provide engineering support remotely to all VSO volunteers as required throughout their placement in development projects around the world.

As with other partner organisations EngineerAid will be presented with the opportunity to increase its network of partner organisations which operate globally.

Database of Engineering Experience Grows

EngineerAid has had a tremendous response from engineers. This has been supported by press coverage in magazines such as 'Professional Engineering' and IMechE's 'Agenda'.

EngineerAid has built up a database of over 100 volunteer engineers and the list is still growing. This is currently allowing the organisation to draw on over 800 years of engineering experience and knowledge! Thank you to all of you who have expressed an interest so far. The response has been amazing. The support of the engineering community is central to the success of EngineerAid.

EngineerAid Meets TFSR

EngineerAid met with TFSR in Southampton for successful talks of collaboration. TFSR, as an aid organisation working in Africa, have agreed to introduce EngineerAid to their local partner network in Africa, consisting of forty NGOs. A press release together with a survey to gauge the needs and situation in Africa will be sent to these local partners.

EngineerAid will work to provide engineering and technical solutions as and when required by TFSR and their partner organisations in Africa, maintenance schedules for equipment provided by TFSR, designing of equipment to be manufactured using basic materials, training material for technical departments.
